SUBJECT: Final RI for Standard Chlorine

DATE: 9-30-92

FROM: Kate Lose (3HW42) /L
DE/MD Section

TO: Peter Knight
NOAA CRC

Attached is the "FINAL RI" for Standard Chlorine. The report should address all of the comments which we have discussed in previous meetings and telephone conversations. Diane Wehner made comments in a memo dated Feb. 6, 1992 to Bob Davis which were incorporated into a DNREC letter to Standard Chlorine dated March 18, 1992. Diane met with with Standard Chlorine in April 1992. During the transition of NOAA staff, Bob Davis has addressed NOAA concerns.

Standard Chlorine is in the process of developing the Feasibility Study. Based on the results of the RI, we need to advise Standard Chlorine of appropriate clean-up levels to assist them in evaluation of treatability studies.

I would appreciate it if you could review the appropriate sections of the RI to verify that have adequately responded to NOAA's comments. In addition, I need the clean-up levels that EPA will require for soils/sediment/groundwater remediation. Please respond via LAN or memo by October 16, 1992. Thanks!!!

The RI Report consists of the following documents:

- RI for the SCD Site Volume 1
- RI for the SCD Site, Attachements 1 & 2
- Addendum to the Draft RI for the SCD Site
- RI Report for the SCD Site, Volume II, Appendix A-F
- RI Report for the SCD Site, Volume III, Appendix G-L
